JavaScript Data Manipulation	1
1. Manipulating Strings	2
2. Manipulating Arrays	2
3. Manipulating Objects	2
Quiz Questions and Answers	3
Q1: How do you remove the last element from an array in JavaScript?	3
Q2: What will be the output of the following code?	3
Q3: How can you add a property height with the value 170 to an object person?	3
Q4: Which method would you use to convert an array ['apple', 'banana', 'orange'] into a string separated by commas?	4
Q5: Consider an object let car = { make: 'Toyota', model: 'Corolla' };. How can you add a new key year with the value 2021 to this object?	4

## JavaScript Data Manipulation

JavaScript offers a variety of ways to manipulate data, especially when dealing

with strings, arrays, and objects. Let's explore some common data manipulation

techniques with examples and explanations.

#### **1. Manipulating Strings**

```
Example: Concatenating strings
let string1 = "Hello, ";
let string2 = "world!";
let combinedString = string1.concat(string2); // "Hello, world!"
Explanation: The concat() method is used to merge two or more strings. This does
not change the existing strings but returns a new string.
```

#### 2. Manipulating Arrays

```
Example: Adding elements to an array
let fruits = ["Apple", "Banana"];
fruits.push("Orange"); // ["Apple", "Banana", "Orange"]
Explanation: The push() method adds one or more elements to the end of an array
and returns the new length of the array.
```

#### 3. Manipulating Objects

Example: Adding a new property to an object let person = { name: "Alice", age: 25 }; person.job = "Developer"; // { name: "Alice", age: 25, job: "Developer" } Explanation: You can add new properties to JavaScript objects by simply assigning a value to a new key on the object.

### **Quiz Questions and Answers**

Q1: How do you remove the last element from an array in JavaScript?

```
A) array.pop()
B) array.push()
C) array.shift()
Answer: A) array.pop()
```

Q2: What will be the output of the following code?

let greeting = "Hello"; let name = "Alice"; console.log(greeting.concat(" ", name)); A) Hello Alice B) HelloAlice C) SyntaxError

Answer: A) Hello Alice

Q3: How can you add a property height with the value 170 to an object person?

- A) person[height] = 170;
- B) person.height = 170;
- C) person(add: {height: 170});

Answer: B) person.height = 170;

Q4: Which method would you use to convert an array ['apple', 'banana', 'orange'] into a string separated by commas?

```
A) join(',')
B) concat(',')
C) toString()
Answer: A) join(',')
```

Q5: Consider an object let car = { make: 'Toyota', model: 'Corolla' };. How can you add a new key year with the value 2021 to this object?

```
A) car.add('year', 2021);
B) car['year'] = 2021;
C) car.year(2021);
Answer: B) car['year'] = 2021;
```

These examples and quiz questions provide a basic understanding of how data manipulation works in JavaScript, a crucial skill for handling dynamic data in web applications.
